

## Simplicity & Strategy

The **CPU-0500** outdoor reset control is compatible with 2-stage boilers, modulating mixing, setpoints or solar/differential applications.

Accomplish intricate installations using the modular expandability of the 1000 product line which are compatible with remote monitoring and management via the **CIS-0110**:

- **CPU-1000**: staging, mixing, DHW applications
- **ECO-1000**: controls chillers, heat pumps, and solar collectors
- **SNO-1000**: snowmelt control utilizes optical sensor technology

The **HYD-0100** mixing station includes built-in 3-speed pump, outdoor reset control for a fully integrated packaged solution, ideal for multiple mixing applications.

The **SOL-0100** inclusive SolarBloc uses a variable speed pump for automatic BTU calculations, temperature/pressure and flow sensor for dump or back-up installations.

**CPU-0500 Stand-Alone Unit**

**CPU-1000 Stage, Mix, DHW**

**ECO-1000 Solar/Geothermal**

**SNO-1000 Snowmelt**

**Expansion Modules**

**HYD-0100 HydroBloc**

**SOL-0100 SolarBloc**

**CIS-0110 Remote Software**
