

Submittal: HBX ECO-1000

Project:[]

HBX Controls Inc Specification

Part 1: ECO-1000 Product

1. The Hydronic Control must be a full microprocessor control with at least a 16-bit, 20MHz integrated microprocessor chip.
2. The Control must be capable of utilizing an on-board real-time clock (Month, Day, Year and 24 hour clock) with a Lithium-Ion battery for back up during power outages.
3. A 7-day event history must be stored in EEPROM for viewing and troubleshooting.
4. The Control must be capable of the following Input/Output Functions
 - a. 3 (2-wire) optically isolated input demand signals from a 20-240VAC source:
 - i. Heat Demand
 - ii. Cooling Demand
 - iii. Fault Indicator
 - b. 3 (2-wire) Thermistor Inputs:
 - i. Tank Temperature
 - ii. GND lop or cold tank Geo or Solar sensor
 - iii. Outdoor temp or Return Solar sensor
 - c. 2 (2-wire) Programmable Relays
 - d. 1 (3-wire) power source rated for 120 vac $\pm 10\%$ and at least 30 amps. * Each terminal to be labeled L, N & Grnd (Line, Neutral & Ground)
 - e. 3 (3-wire) 120 vac outputs rated at least 10 amps each capable of running auxiliary pumps or fans. * Each terminal to be labeled L, N & Grnd (Line, Neutral & Ground)
5. The Control must have the ability to program and control for Warm Weather Shut Down and Cold Weather Shut Down.

6. The Control must be capable of automatically calculating and resetting the heating storage tank target temperature based on Outdoor Temperature.
7. The Control must be modular in design. Capable of staging up to 14 compressor stages using optional Expansion Modules and one single microprocessor managing the control logic for potential future upgrades:
 - a. Multi-Stage Heatpumps/ Chillers can be selected for Hi/Lo or Lo/Lo stage configurations.
 - b. A fixed first or fixed last option must exist within the control menu.
 - c. Optional Heatpump Rotation must be available to rotate heatpumps automatically every 48 hours of actual running time.
 - d. The control must directly interface, without any cross wiring, with expansion modules that provide:
 - i. extra dry contacts (EXP-0100)
 - ii. extra powered contacts (EXP-0300)
 - iii. zoning capability (ZON-0500)
8. The Control must have a cooling interlock feature.
9. The Control must have separate programming parameters for operating a backup heat source.
10. The Control must use a 128 x 64 pixel full graphic display. The display must be capable of showing the following information in one single screen
 - a. Heat Demand
 - b. Cooling Demand
 - c. Fault Indicator
 - d. 3 separate Set Point Demands
 - e. WWSD (Warm Weather Shut Down)
 - f. Tank Temperature (Actual vs. Target)
 - g. GND Loop (Actual vs. Target)
 - h. Outdoor Temperature
 - i. Set Point Temperature
 - j. Time, Month, Day and Year
11. A screen must be available to display and read each of the accumulated run times for each heatpump (stage).
12. In addition to the 3 standard Thermistor/sensor inputs 3 more optional (requires expansion modules) Thermistor values must be available for viewing in the standard control screen. The optional Thermistor/sensors may be used for; set point loads, return

water temp, DHW, floor warming, Room/Zone sensing etc.

13. In the event of Thermistor sensor problems the main display will indicate an “open” or “short” condition in plain text.

14. The Control must be capable of retrieving from its memory both the minimum and maximum temperature extremes that each of the 6 Thermistors have been subjected to. The month, day, year and actual time of the recorded temperature must be displayed to assist in system diagnoses and troubleshooting.

15. A Test function must be present to test and cycle each relay independently for troubleshooting and commissioning purposes. Each relay must be able to stay on for at least 30 seconds.

16. The Control must have a lock-out feature to avoid unauthorized tampering with the programming menu.

17. The Control must have a standard RS232 communications port for optional remote communication

18. The Control must be capable of interfacing with optional Communications software and capable of at least the following functions:

- a. Real-Time Data Logging
- b. System Status viewing
- c. Control Reconfiguration
- d. Alarm function

19. The Control must be capable of running multiple applications

- a. Geothermal
- b. Solar

20. The Control must be ETL approved.

Part 2: Acceptable Products

1. HBX ECO-1000 Geothermal/Solar Control

Part 3: Physical Dimensions

Part 4: Technical Data, Main Parts & Labels

Inputs / Outputs:

- 3 x Thermistor Input (10K Ohm)
- 3 x Miscellaneous Optically Isolated Powered (Relay) Inputs (20-240 VAC)
- 2 x Relay Dry Contact (120VAC, 10A) Outputs
- 3 x Pump Output Relays (120 VAC, 10 A)
- 1 x RJ-11 (RS-232 Communication)

Power Supply:

120 VAC, $\pm 10\%$, 60Hz

Real Time Clock Battery:

Lithium-Ion

Microprocessor:

16Bit, 20MHz

Languages:

English

Graphic Display:

128 x 64 pixels (2.17" x 1.10" (55mm x 28mm) viewable area)

Weight:

0.95 KG (2.1 lbs)

Dimensions:

7.48" x 6.69" x 2.76" (190mm x 170mm x 70mm)

ETL Listings:

Meets CSA C22.2 No. 24
Meets UL Standard 873
ETL Control No. 3068143

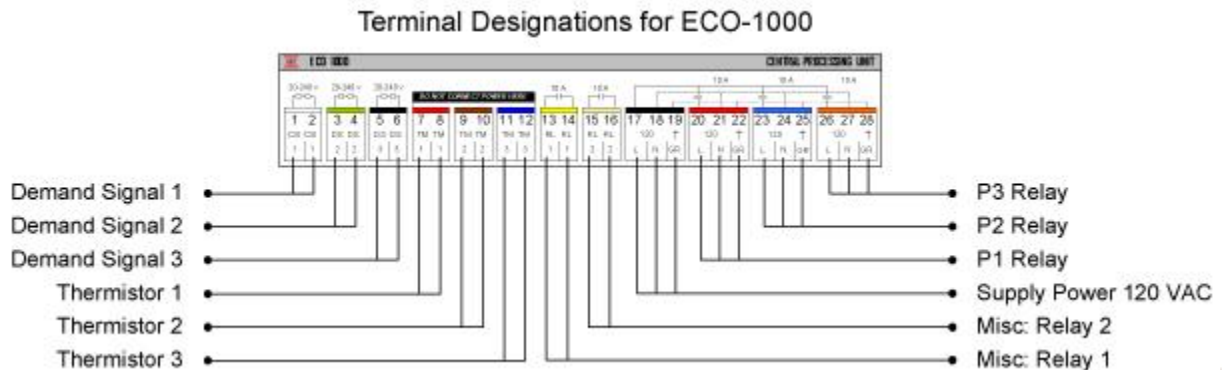

Storage:

50°F to 104°F (10°C to 40°C)

Supplied Parts:

2 x HBX 029-0022 – 10K Ohm Thermistor, 12" lead wire
1 x HBX OUT-0100 – 10K Ohm Outdoor Sensor

Pin Out / Terminal Block Labels:

Part 5: HBX Sensor Temperature Conversion / Resistance Table

Celsius	Fahrenheit	Ohms	Celsius	Fahrenheit	Ohms	Celsius	Fahrenheit	Ohms
